

### **Former R.I. Busse Company Elk Grove Village, Illinois**

Fountainhead Engineering LTD (FHE) was retained as Environmental and Regulatory Consultant that coordinated R.I. Busse's response to USEPA's request for compliance verification under New Source Performance Standards (NSPS) (40 CFR Part 60) and developed subsequent air permit submissions to the Illinois Environmental Protection Agency (IEPA).

The client operated concrete reprocessing plants in northeast Illinois and the Elk Grove Village, Illinois location was permitted to process 150 tons/hour of concrete. In addition, FHE simultaneously addressed a USEPA request for information pursuant to 40 CFR Part 114 (Part 114 Request). USEPA Method 9 Visible Emissions field tests were conducted at the firms' two fixed locations and their mobile unit for submission to USEPA, IEPA, and the City of Chicago. FHE developed facility and site procedures to insure compliance with permit conditions.

FHE coordinated responses and requests for additional information from the United States Environmental Protection Agency, which included all relevant data on subsidiaries companies. All agencies were satisfied with the company's response and further enforcement actions were discontinued.
